

AGL present themselves as a *sustainable, innovative company that is taking action on climate change...*

But what happens when you peel back the greenwash?

The fact is that **AGL is AUSTRALIA'S BIGGEST CLIMATE POLLUTOR.**

That's right: this energy giant is up to its neck in fossil fuels that are destroying our climate and communities.

81%

Amount of AGL's power that comes from coal. The company's emissions have gone up more than 90% in the last year

3 of 8

AGL owns three of the eight dirtiest coal fired power stations in the country: Loy Yang in Victoria, and Liddell and Bayswater in New South Wales.

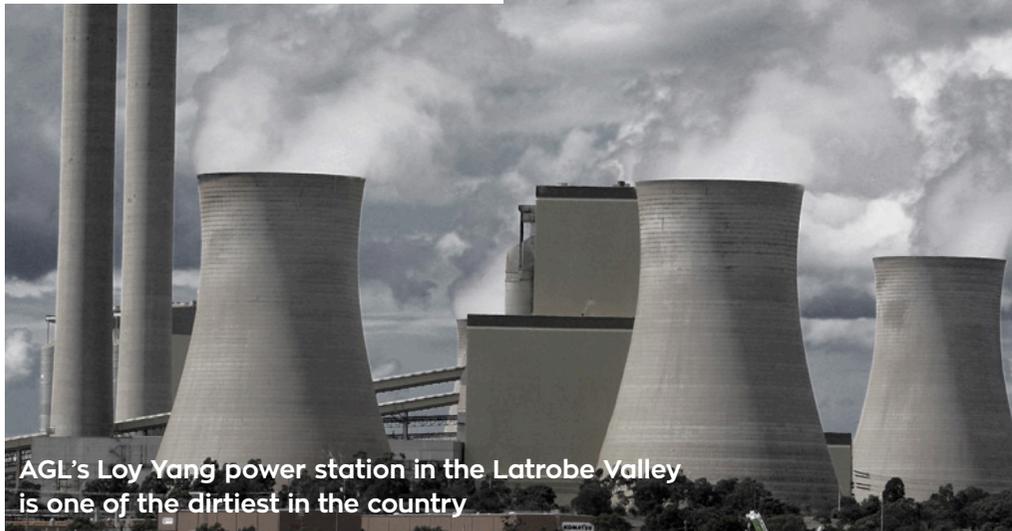

32

The number of years AGL plans to keep their coal power stations open. This plan actually extends the lifetime of these plants — locking in three more decades of climate pollution.

At a time when **we need to urgently shift to clean energy**, this is nowhere near good enough. To match the promise of its marketing campaign, **AGL must have a plan to get off fossil fuels in a matter of years, not decades.**
