

AGL'S DIRTY SECRETS

AGL IS AUSTRALIA'S

BIGGEST

CLIMATE POLLUTER

81%

Amount of AGL's power that comes from coal. The company's emissions have gone up more than 90% in the last year.

3 of 8

AGL owns three of the eight dirtiest coal fired power stations in the country: Loy Yang in Victoria, and Liddell and Bayswater in New South Wales.

32

The number of years AGL plans to keep its coal power stations open. This plan actually extends the lifetime of these plants, locking in three more decades of climate pollution.

AGL presents itself as a clean energy company... but the fact is AGL is up to its neck in fossil fuels.

At a time when we need to urgently shift to clean energy this is nowhere near good enough. If we work together we can shift this dirty energy giant from all talk to real climate action.

Through talking to AGL customers and exposing the company's fossil fuel legacy, pressure from shareholders, creative community actions and sharing the stories of the communities living near AGL's power stations, we will show the board and CEO that:

If AGL is serious about taking real action on climate change, they need a plan to exit fossil fuels within a decade.
